

# Dispo Launch Checklist

Property: \_\_\_\_\_ Assistant: \_\_\_\_\_ Launch date: \_\_\_\_\_ Offer deadline: \_\_\_\_\_

**PICK THE BRANCH FIRST.** ☐ **BALTIMORE COUNTY / OTHER** → Phases 1–4 on Day 1, VIP window expires Day 3, blitz Day 3. ☐ **BALTIMORE CITY** → **no VIP window**. Phases 4 and 5 fire together on Day 1. No neighborhood names anywhere in the copy — street address or landmark only.

## 1 — DRAFT THE LISTING Nothing else starts until Joshua has the draft

- ☐ **1.1** Confirm contract executed, deposit receipted, title order open
- ☐ **1.2** Gather: **call transcript, tax record, acquisition notes**, photos, scope
- ☐ **1.3 Verify square footage against a second source** — tax record alone is not enough
- ☐ **1.4** Load all sources into the off-market listing template (\$2)
- ☐ **1.5** Draft the initial listing
- ☐ **1.6** Proofread vs. the Fairfax Rd benchmark — no “cosmetic,” no “full rehab,” no rehab estimates, comp link in
- ☐ **1.7** Correct every error found, then read it once more cold
- ☐ **1.8 Tell Joshua the draft is ready**. Do not move to 3 without his response

## 2 — TARGETED BUYERS AND REALTORS The people already doing business in this pocket

- ☐ **2.1** InvestorBase: subject as center, 24-month window. Widen until **100+ buyers**. Radius used: \_\_\_\_\_
- ☐ **2.2** Export CSV — confirm **purchase addresses, dates and prices** survived. Contacts-only export cannot be ranked
- ☐ **2.3** MLS pull: closed, 12 months, ceiling ~2× ARV, radius by **drive time**. **100+ realtors**, both agents per sale
- ☐ **2.4** Rank both lists (\$3). If the A tier is sorted by distance, re-run
- ☐ **2.5** Import both to GHL, tagged. **Opportunity Value = fit score**
- ☐ **2.6** Counts logged: \_\_\_\_ pool · \_\_\_\_ Tier A · \_\_\_\_ agents ranked · \_\_\_\_ Tier A agents
- ☐ **2.7 Hour 1** — SMS to buyer Tier A and realtor Tier A, each naming their own prior deal. **Needs the live URL (3.7)**
- ☐ **2.8 Hour 2** — emails, one per buyer, plain text, references the text
- ☐ **2.9 Hour 4** — call buyer top 20% and realtor top 40%. **Commission stated in the first minute of every agent call**

## 3 — FINALIZE AND PUBLISH Must be live before anything sends

- ☐ **3.1** Gather: call transcript, tax record, acquisition notes, **and the 1.5 draft**
- ☐ **3.2** Rewrite in **Claude** — find the sales angle and pitch for *this* property (\$9.11)
- ☐ **3.3** Rewrite the same inputs in **ChatGPT**
- ☐ **3.4** Synthesize both into one final version — take the strongest angle from each, don't average them
- ☐ **3.5** Upload to the site and publish
- ☐ **3.6** Send the **published URL** back to Claude for a final edit pass (\$9.12)
- ☐ **3.7** Upload the newest version. Check against the prior version — **nothing repetitive**
- ☐ **3.8** Click the live URL on your own phone: photos load, comp link works

## 4 — VIP BLAST Day 1, Hour 3 · County only — City folds VIP into 5

- ☐ **4.1** Segment pulled and counted: \_\_\_\_\_ VIPs
- ☐ **4.2** First-look SMS sent, staggered 15–20 min
- ☐ **4.3** Lockbox live and code in the text
- ☐ **4.4** 48-hour window stated with the exact expiry
- ☐ **4.5** Top 10 VIPs called same day
- ☐ **4.6** Every reply logged on the card, not in your head
- ☐ **4.7 At expiry: sold → stop. Not sold → go to 5**

## 5 — FULL BLITZ Day 3 County · Day 1 City

- ☐ **5.1 Priority buyers** — SMS, then call the top 20
- ☐ **5.2 Regular buyers** — SMS, then Sly RVM
- ☐ **5.3 Full email list** — one broadcast, comp link in it
- ☐ **5.4 Round 2 — targeted buyers** from Phase 2, one pattern-interrupt SMS
- ☐ **5.5 Round 2 — realtors** from Phase 2, second call not a second voicemail
- ☐ **5.6** Every segment tagged `dispo-[address]` before sending
- ☐ **5.7** Send log complete: channel, count, time (\$10)

## 6 — INBOUND One named person owns the line all day

- ☐ **6.1** Inbound owner named in writing before 2.7 goes out
- ☐ **6.2** Qualified in order: seen it → closed anything like it → how funded → when can you walk it → **price last**
- ☐ **6.3** Answers logged during the call
- ☐ **6.4** Showing booked or a stated position captured
- ☐ **6.5** Nothing sits in voicemail past 30 minutes

## 7 — SHOWINGS

- ☐ **7.1** Access tested by us before the first walk
- ☐ **7.2** Every walker logged with date and time
- ☐ **7.3** Post-walk follow-up same day, every time
- ☐ **7.4** Objections captured **in their words**

## 8 — OFFERS

- ☐ **8.1** Offer comparison sheet filled, one row per offer (\$8)
- ☐ **8.2** Proof of funds received and dated for each
- ☐ **8.3** Recommendation to Joshua: price, deposit, close date, **close probability**
- ☐ **8.4** Winner notified, contract out same day
- ☐ **8.5 Losing buyers told same day, and told what won**

## 9 — HANDOFF AND CLOSE OUT

- ☐ **9.1** Executed assignment and buyer info to the TC
- ☐ **9.2** Title introduced to buyer, deposit instructions sent
- ☐ **9.3** All channels stood down — no live campaign on a sold deal
- ☐ **9.4** Durable tags promoted, campaign data recorded (\$11)
- ☐ **9.5** Master buyer and agent files updated

### ORDER OF OPERATIONS

Day 0 — Phase 1, draft to Joshua  
 Day 1 AM — Phase 2.1–2.6, pull and rank both lists  
 Day 1 midday — Phase 3, listing live  
 Then Hour 1 — 2.7 targeted + realtor SMS  
 Hour 2 — 2.8 targeted emails  
 Hour 3 — Phase 4, VIP, lockbox live  
 Hour 4 — 2.9 calls, plus top 10 VIPs  
 Day 3 — Phase 5, blitz and round 2

**STOP AND ESCALATE TO JOSHUA — do not improvise:** any price change · any terms change · a buyer asking for an inspection contingency · title defect or access issue · any seller communication · an agent asking for something outside the standard commission · **three or more buyers naming the same objection** — that is market data, not rejection, and it usually means reprice (\$11).

## §1 — ROLES AND SEGMENTS

### Who owns what

| Role                       | Owns                                                                              | Name   |
|----------------------------|-----------------------------------------------------------------------------------|--------|
| Dispo assistant            | This checklist, start to finish. Every box is yours unless listed below           | _____  |
| Dispo agent                | Showings, offer negotiation, agent-channel calls                                  | _____  |
| Joshua                     | The 1.8 draft approval, price, terms, any deviation from this SOP                 | Joshua |
| Transaction coordinator    | Everything from 9.1 forward                                                       | _____  |
| Inbound owner (launch day) | The phone, all day. Can be the assistant, but must be named in writing before 2.7 | _____  |

### Segment definitions

**[ASSUMPTION — CONFIRM WITH JOSHUA BEFORE FIRST USE.]** Proposed definitions, not existing ones. Once confirmed they become the standing rule and the tags get built to match.

| Segment                 | Definition                                                                                                                                      | Tag               |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>Targeted buyer</b>   | Pulled fresh from InvestorBase for this deal. Has bought this product in this pocket. Not a list member yet — they earn a segment by responding | buyer-targeted    |
| <b>Targeted realtor</b> | Licensed agent ranked off closed MLS sales in this submarket                                                                                    | agent-[submarket] |
| <b>VIP</b>              | Has closed at least one deal with IHT, or sits on the committed VIP list. Gets the 48-hour window on County deals                               | buyer-vip         |
| <b>Priority</b>         | Walked a property or submitted an offer with IHT in the trailing 12 months, no close yet. Engaged, unproven                                     | buyer-priority    |
| <b>Regular</b>          | Everyone else on the buyer list with a valid phone or email                                                                                     | buyer-regular     |

**Segment hygiene runs monthly, not per deal.** A buyer who closes moves to VIP. A targeted buyer who responds moves to Priority. A buyer who has ignored twelve consecutive campaigns moves to dormant and drops out of the regular blast. Nobody is promoted or demoted mid-launch.

### Two sequencing rules that hold the whole SOP together

**Nothing sends before the listing is live.** Phase 2 pulls and ranks in the morning because that work depends only on the property facts, not on the copy. But 2.7, 2.8 and 2.9 all point at a URL, so they fire *after* 3.7. If the listing slips a day, the sends slip with it — do not send targeted SMS to a dead link. The best buyer on the ranked list clicks in the first ninety seconds. That is what makes them the best buyer.

**Targeted runs before VIP, and that's deliberate.** The Phase 2 lists are people who have already put money into this specific pocket, verified by their own closed transactions. They are the highest-probability buyers on any deal and they aren't on our list yet. The VIP text still says the deal comes to them before it goes out to the list, and that stays true — Phase 5 is the list. **Do not upgrade it to “nobody else has seen this.”** If a VIP asks directly, the honest answer is that we work a ranked list of local buyers and agents in parallel and they get the window and the lockbox. That answer costs nothing. Being caught in the other one costs the relationship.

## §2 — DRAFT THE LISTING (checklist 1)

**Day 0.** The draft is the source document for everything downstream — the ranking prompt, the final listing, every script. An error here propagates into all of them.

### 1.1 — Confirm before drafting

Contract fully executed with all signatures · deposit wired and receipted by title · title order open with a file number. If any of the three is missing, drafting is fine but **nothing publishes and nothing sends**.

### 1.2 — Sources, in this order

1. **Initial call transcript.** The seller's own words about condition, timeline, what's been done and what hasn't. This is where the sales angle usually comes from, and it is the source most often skipped.
2. **Tax record.** Legal description, lot, year built, assessment, prior sale, and the *starting point* for square footage — not the answer.
3. **Acquisition notes.** What the agent saw, what the seller wanted, why they're selling, what the walkthrough turned up.
4. Photos and video.
5. Contractor scope sheet if we have one.

### 1.3 — Square footage

**Tax record alone is not verification.** Public record is wrong often, and when it's wrong it's usually off by hundreds of feet: missed additions, finished basements counted above grade, decades-old data, some jurisdictions never measured at all. Two failure paths:

- **In the ranking (Phase 2).** Square footage feeds product-type and price-band scoring. A 1,900 SF house entered as 1,400 gets ranked against the wrong buyer cohort and nobody can see the error.
- **In the listing.** A buyer who walks a house 400 feet smaller than advertised does not renegotiate. They leave, and they discount everything else we told them.

Verify against the tax record **and** one of: an appraisal, a prior MLS listing with measured SF, or a physical measurement. If sources disagree, put both in the draft with the source named — "1,412 per SDAT; 1,806 per 2019 MLS" — and never average them.

### 1.4 — Required fields in the template, no blanks

Address · buy-it-now price · ARV · % of ARV · above-grade SF (verified) · basement SF, finished and unfinished separately · total under roof · beds · baths, full and half separately · lot size · year built · water source (well: depth, last test) · sewer (septic: tank age, last pump, inspection status) · outbuildings with condition · road surface, public or private, frontage, who maintains · scope completed · scope remaining · terms (assignment or double close, deposit, inspection period, close-by date) · title company and file number · showing plan · offer deadline to the minute · comp link

A blank becomes a question asked live at hour four by a buyer deciding whether we're organized enough to close. It also becomes a guess the model makes on our behalf in Phase 2.

### 1.6 — Proofread against the benchmark

The standard is the **4305 Fairfax Rd listing (final version)**: conversational honest opener, no hype, no condition ratings, no rehab estimates, comp link included.

#### The rules, every time:

- Never "cosmetic" unless Joshua has said it is.
- Never "full rehab" or "full renovation" — describe the actual remaining work and let the buyer scope it at walkthrough.
- No rehab cost estimates, no all-in numbers, no yield math. ARV, price and rent projections only.
- No taglines, no slogans, no clever phrasing.
- Comp link in. Always. Never "contact for comps" when a Bright MLS link exists.
- **Baltimore City: no neighborhood name anywhere.** Street address or a nearby landmark only. This applies to every channel, not just the listing.

### 1.7 — Correct, then read it cold

Fix everything the proofread turned up, then step away and read it once more from the top as if you'd never seen it. Most errors that survive a first pass are numbers that contradict each other — SF that doesn't add up, a % of ARV that doesn't match the price and ARV, a deadline that falls before the showing window.

### 1.8 — Hand it to Joshua

Tell him the draft is ready. **Phase 3 does not start without his response.** Phase 2 can and should start in the meantime — the pull and the ranking depend on property facts, not on the copy.

## §3 — TARGETED BUYERS AND REALTORS (checklist 2)

**Day 1.** Two lists, both ranked against this specific deal. This is the highest-yield phase in the SOP and the one most likely to get shortened when the day gets busy. Don't shorten it.

### 2.1-2.2 — The buyer pull

- InvestorBase, subject property as center, 24-month transaction window.
- Start tight — 2 miles urban, 5 suburban, 10 rural — and widen in increments until the result set clears **100+ buyers**. Record the radius; the ranking prompt needs it.
- Export to CSV. **Open the file before you close the tab** and confirm these survived: buyer entity, contact name, phone, email, mailing address, purchase addresses, purchase dates, purchase prices, property characteristics, distance from subject, financing type where available.

**If purchase addresses, dates or prices didn't survive, the ranking cannot run.** Re-export with a transactions view, not a contacts view. Most platforms default to contacts, which looks like a buyer list and cannot be ranked.

**Why 100 is the floor:** after the ranking gates are applied, most rows drop out — no purchase in the window, wrong product class, outside every price band. A 60-buyer export routinely yields an A tier of two or three names, which is a coincidence, not a channel. Below 100, widen.

**On widening:** every mile adds volume and dilutes relevance. That's fine — the ranking re-sorts for relevance, and a distant buyer with a perfect scope and price match correctly outranks a close buyer with neither. What's not fine is widening the radius and then working the list in export order. The radius creates the pool; the ranking creates the order.

### 2.3 — The realtor pull

**An MLS export is not a buyer list. It is a transaction list.** It contains no buyer identities at all — the "Selling Agent" field is MLS terminology for the buyer's agent, not the buyer. What it gives us is people. Every closed sale has a **list agent**, who holds the underbidder list from that sale, and a **buyer's agent**, who has a live rehab client. Both are worth a text, and the value of this phase is converting transactions into ranked people.

| Parameter     | Setting                                | Why                                            |
|---------------|----------------------------------------|------------------------------------------------|
| Status        | Closed                                 |                                                |
| Window        | Trailing 12 months                     |                                                |
| Price ceiling | ~2× ARV                                | Luxury closings add noise and drag the ranking |
| Radius        | By <b>drive time</b> , not county line | Submarkets don't follow jurisdiction           |
| Target        | <b>100+ agents</b> after dedupe        | Same floor logic as the buyer pull             |

**Columns that must survive:** both agents' name, cell, email, office and office phone · close price · list price · close date · DOM · year built · finished SF · lot size · water source · sewer/septic · garage · public and private remarks · financing type if Bright will give it. **Financing type, where available, replaces keyword inference and materially tightens the top tier.**

**No MLS access on a given deal?** The fallback is a partner agent pulling the export for us. Log it as a dependency in the send log — never skip the channel silently.

### 2.4 — Rank both lists

Run the ranking prompt separately against each list, with the 1.5 draft pasted in full as the deal outline. Full prompt and mechanics: **The 24-Hour Dispo System** workflow.

**Buyers score on:** scope/product-type match (30) · price band against both the buy number and ARV (20) · proximity (15) · purchase count and recency (15) · financing (10) · systems, well and septic (5) · vintage (5).

**Agents score on:** whether their closings match this deal's product and scope class, price band, systems and vintage, plus closing volume in this submarket and recency.

**The check that matters, on both lists:** if the A tier is essentially ordered by distance, the ranking failed. Distance is the cleanest and most sortable field in either file and a model will let it dominate unless stopped. **A gut buyer forty minutes away beats a light-rehab buyer four minutes away.** Re-run rather than importing a distance sort.

**Do not pad the A tier.** If six buyers pass the gates, the A tier has six buyers. A thin A tier is information — the radius was too tight, the scope class is unusual here, or our price band doesn't overlap what this pocket actually buys. Worth knowing on Day 1 instead of Day 4.

### 2.5 — Import

Both lists into GHL under the deal pipeline, tagged `dispo-[address-slug]` plus their segment tag. **Opportunity Value = fit score (0-100)** — not a dollar figure, a sort key. The board sorts by value, so the pipeline is the call list and anyone who opens it works top-down.

### 2.6 — Log the counts

Buyers in pool \_\_\_\_ · radius used \_\_\_\_ · buyer Tier A \_\_\_\_ · MLS rows \_\_\_\_ · agents ranked \_\_\_\_ · agent Tier A \_\_\_\_

These numbers are how we tell, deal over deal, whether a submarket is thin or our gates are wrong.

### 2.7-2.9 — The three touches

**Gate: the listing must be live (3.7) before 2.7 fires.** Everything below points at that URL.

| Hour | Buyers                                                                                           | Realtors                                                                                                                                   |
|------|--------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | SMS to Tier A, staggered 15–20 min. Opens with their prior purchase, asks for two minutes (§9.1) | SMS to Tier A, each naming that agent’s own closing and asking whether they still have that buyer (§9.7)                                   |
| 2    | Email, one per buyer, plain text, references the text sent an hour earlier (§9.2)                | —                                                                                                                                          |
| 4    | Call the top <b>20%</b> of the ranked list, in order (§9.3–9.4)                                  | Call the top <b>40%</b> — a higher share, because agents are a smaller and more responsive population and the conversation is peer-to-peer |

**Two rules specific to the agent calls:**

- **State the buyer-agent commission in the first minute, unprompted.** It is the first thing an agent wants to know and vagueness is the fastest way to lose one. Worked example in §9.8.
- **Ask them to name the client, not to confirm they have one.** “Do you have a buyer for this?” gets a polite yes from everyone. “Who’s the client — the one who bought the Wilmot property?” separates a real lead from a courtesy.

**Hold the four-hour gap before calling.** The voicemail references both the text and the email by name, and that stacking is what makes the third touch the one that gets returned. Call at hour two and the voicemail can’t reference an email that hasn’t been sent.

## §4 — FINALIZE AND PUBLISH (checklist 3)

**Day 1, midday, after Joshua responds to the 1.8 draft.** This is where the listing stops being a spec sheet and becomes a piece of selling.

### 3.1 — Reassemble the sources

Call transcript, tax record, acquisition notes, **and the 1.5 draft.** All four. The draft alone is not enough input for the rewrite — the whole point of this phase is that the model sees the raw material again and finds the angle the draft missed.

### 3.2-3.3 — Rewrite in both, separately

Run the same inputs through Claude and through ChatGPT, in separate sessions, with the same prompt (§9.11). Do not show either one the other's output. Two independent passes produce two different angles; showing one the other collapses them into a single voice and defeats the exercise.

**What you're asking for is a sales angle, not a summary.** Every property has one thing that makes it worth buying — the systems already done, the lot, the rent relative to the number, the road, the fact that nobody else can get to it off-market. The draft states facts. The rewrite has to find which fact is the reason.

### 3.4 — Synthesize

Take the strongest angle from each and build one final version. **Do not average them.** Averaging two good openings produces one mediocre opening. Pick the better lead, then borrow the better section from the other — usually the scope framing from one and the “you should know” section from the other.

**Then check the synthesis against the rules in §2 (1.6) again.** Both models will drift toward hype if you let them: superlatives, “incredible opportunity,” condition ratings, invented rehab numbers. Every one of those gets cut before publish.

### 3.5 — Upload and publish

Live on the site.

### 3.6 — Send the published URL back to Claude

Final edit pass against the live page (§9.12). This catches what a draft review can't: how it actually reads on the page, formatting that broke on upload, sections that run long, a photo caption contradicting the copy, and repetition that only becomes visible once the whole thing is laid out.

### 3.7 — Upload the newest version

**Check it against the version you just replaced.** The failure mode here is specific and it happens every time nobody looks: the edit pass adds a paragraph that says the same thing as one already three sections up, and now the listing repeats itself. Read the new version end to end before it goes live. If two sections make the same point, cut the weaker one.

### 3.8 — Click it on your own phone

Photos load, comp link works, the page renders, nothing is cut off. Most buyers open it on a phone; check it the way they'll see it.

**Only now does 2.7 fire.**

---

## §5 — VIP BLAST (checklist 4)

**Day 1, Hour 3. County and everywhere else. Baltimore City skips the window entirely** — VIPs still get texted, but in Phase 5, alongside everyone else.

**The model:** first look by text → lockbox access → 48-hour window → full list if not sold.

| Step | Detail                                                                                                                                                                  |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4.1  | Pull <code>buyer-vip</code> , count it, write the count in the send log. A VIP segment shrinking deal over deal is a hygiene problem — flag it, don't fix it mid-launch |
| 4.2  | Send the first-look SMS (\$9.5). <b>Stagger over 15-20 minutes.</b> A simultaneous send is detectable as a blast by carriers and by people                              |
| 4.3  | Lockbox live <i>before</i> the text goes out, with the code in the message. A VIP who drives out and can't get in is a VIP we've spent                                  |
| 4.4  | State the exact expiry — day, date and time. "48 hours" without a timestamp is a suggestion                                                                             |
| 4.5  | Call the top 10 VIPs the same day, in the Hour 4 block. Not a pitch — a heads-up that it goes wide in two days                                                          |
| 4.6  | Log every reply on the card as it comes in                                                                                                                              |
| 4.7  | At expiry: under contract → stop, go to §8. Not under contract → Phase 5 fires                                                                                          |

**Do not extend the window.** If it moves once it isn't a window, and the VIP list learns the deadline is soft — which costs us urgency on every future deal. If Joshua extends it, that's his call, and it gets stated to the list as a deliberate extension with a reason.

## §6 — FULL BLITZ (checklist 5)

**Day 3 on County deals, after the VIP window expires. Day 1 on Baltimore City deals,** where VIPs are folded into 5.1 and get the priority-buyer treatment with no exclusive window.

### 5.1 — Priority buyers

SMS (§9.6) to `buyer-priority`, staggered. Then call the top 20, ranked by most recent engagement — whoever walked or offered most recently gets dialed first. These people have already spent time with us and didn't buy; the call is short and asks what would make this one different.

### 5.2 — Regular buyers

SMS (§9.6) to `buyer-regular`, staggered, followed by Sly RVM (§9.9) two hours later. No individual calls — this segment is volume, and the ranked lists from Phase 2 are a better use of dial time.

### 5.3 — Full email list

One broadcast to the entire email list. Skeleton in §9.10.

- Subject line is the address plus one factual qualifier. Never a headline, never a percentage, never “New Investment Opportunity.”
- Comp link is in the email. Always.
- No rehab estimates, no all-in numbers, no yield math.
- **One send.** Not a three-email sequence — the email list is reach, not a nurture channel, and this deal has a deadline.

### 5.4 — Round 2, targeted buyers

Tier A buyers from Phase 2 who took three touches and said nothing get **one** pattern-interrupt SMS. One line: what held them back, or is it outside their box. Not a re-pitch, no new pricing, no urgency language.

**Then they move to nurture.** Five touches, zero response — no reply, no click, no callback — and they stop being worked on this deal. The rule is deliberately mechanical, because the judgment version (“keep going if it feels promising”) is how a day gets spent calling eight people who already decided. They keep their durable tags and come back into the A tier automatically on the next deal that matches their pattern.

### 5.5 — Round 2, realtors

Agents get a **second call, not a second voicemail.** Different time of day than the Phase 2 call. Agents return calls at a much higher rate than buyers do, and a second voicemail inside 72 hours reads as pressure to a peer.

**What changes on the second call:** lead with the commission again — they may not have listened to the first voicemail — and ask a narrower question. Not “do you have a buyer,” but “who in your book buys this kind of scope?” An agent who can't name anyone on the second ask doesn't have one.

### 5.6 and 5.7 — tagging and the log

Every contact touched carries `dispo-[address-slug]` plus their segment tag. Complete the send log (§10) before end of day. **A channel with no log entry is treated as not sent.**

---

## §7 — INBOUND (checklist 6)

**One named person owns the line for the entire launch day.** Not “whoever is free.” Named, in writing, before 2.7 goes out. If we’re running solo, dialing stops when inbound starts — an inbound caller is pre-qualified by their own reply and is worth more than the next cold dial.

Route all inbound on the deal number to the inbound owner, with a fallback that rings a second person before voicemail. **Nothing sits in voicemail past 30 minutes.**

**The qualifying spine. This order, every time:**

1. *“Have you had a chance to look at the listing yet, or do you want me to walk you through it?”* — tells you whether you’re answering or presenting.
2. *“What have you closed recently that’s similar to this one?”* — confirms or corrects what the ranking thinks about them. If it contradicts, fix the record while they’re talking.
3. *“How are you funding this one — cash, hard money, or a lender?”* — a close-date question, not a credit question. Ask it that way.
4. *“When can you walk it?”* — the showing commitment is the actual qualification. Everything before this is conversation.
5. *“What number gets this done for you today?”* — **last.** A caller asked for price in the first thirty seconds invents a low anchor to protect themselves, and now we’re negotiating against a number they made up before they understood the deal.

**Close:** *“Offers are due [deadline]. If you want it, get me a signed contract and your deposit to [title company] and it’s yours — we’re signing the best terms on the table, not the highest number.”*

**For agent callers,** commission comes first, before the spine. Then ask them to name the client.

Log every answer during the call.

---

## §8 — SHOWINGS AND OFFERS (checklist 7 and 8)

**Access gets tested before the first walk**, by us, not by a buyer standing in the driveway. Lockbox codes fail more often than anyone expects.

**Log every walker.** A showing with no offer is a stronger negative signal than fifty ignored texts — someone spent an hour on the property and chose not to bid. Two of those and the stop rule is halfway fired (§11).

**Capture objections in their words, not summarized.** “Too much work for the number” and “the septic scares me” are different pieces of information leading to different decisions.

### Offer comparison sheet

|                                                       | A | B | C |
|-------------------------------------------------------|---|---|---|
| Buyer entity                                          |   |   |   |
| Segment (targeted / VIP / priority / regular / agent) |   |   |   |
| Price                                                 |   |   |   |
| Deposit — amount, hard when?                          |   |   |   |
| Funding: cash / hard money / conventional             |   |   |   |
| Proof of funds received and dated                     |   |   |   |
| Inspection period (days)                              |   |   |   |
| Close-by date                                         |   |   |   |
| Have they walked it?                                  |   |   |   |
| Contingencies beyond inspection                       |   |   |   |
| Prior closes with IHT                                 |   |   |   |
| Buyer-agent commission owed                           |   |   |   |
| Assignment or double close                            |   |   |   |
| Contract changes requested                            |   |   |   |
| <b>Net to us</b>                                      |   |   |   |
| <b>Close probability — high / med / low</b>           |   |   |   |

The bottom two rows are the decision; price is an input to it. A hard deposit and a short inspection from a buyer who has closed with us beats a bigger number from a first-timer with a 14-day inspection and no proof of funds. On agent-sourced offers, net-to-us is after commission — **compare the nets, not the contract prices.**

**8.5 — tell the losing buyers the same day, and tell them what won.** One sentence. Cheapest relationship investment we make, and it’s why they answer on the next deal.

## §9 — COPY LIBRARY

Proof everything against the 4305 Fairfax Rd benchmark before send. Baltimore City: street address or landmark, never a neighborhood name.

### 9.1 — Targeted buyer SMS (Phase 2, Hour 1)

```
{{first_name}} – {{sender}} here. Saw you picked up
{{nearest_prior_address}} back in {{nearest_prior_date}}.

Got one about {{distance}} miles from it, {{address}}, off market.

Worth 2 minutes on the phone? {{listing_url}}
```

*Distant buyer, strong scope match — the one people skip. Don't:*

```
{{first_name}} – {{sender}}. You did {{nearest_prior_address}}, which is
the same scope as one I just picked up at {{address}}.

Not your usual pocket but it's your usual project.

Worth a look? {{listing_url}}
```

Under 300 characters. Never open with the deal — open with their purchase.

### 9.2 — Targeted buyer email (Phase 2, Hour 2)

**Subject:** the address. Nothing else.

```
{{first_name}} –

Sent you a text earlier, following up here.

You bought {{nearest_prior_address}} in {{nearest_prior_date}}.
{{why_this_fits}}

{{address}}. {{beds}}/{{baths}}, {{sqft}} sf, {{price}}. ARV {{arv}}.
{{scope_remaining}}.

Full details and photos: {{listing_url}}
Comps: {{comp_link}}

Showings this week, offers due {{deadline}}.

Call or text me at {{my_cell}} – I have you at {{their_cell}}.

{{sender}}
```

Plain-text send, individually. No email builder, no header image, no logo, no signature block with icons, no unsubscribe footer, no bold or bullets.

**The test:** hold it next to an email you actually typed on your phone to a buyer you know.

### 9.3 — Targeted buyer call opener (Phase 2, Hour 4)

```
"{{first_name}}? {{full_name}}, Impact Home Team – you got a minute?

Reason I'm calling: you bought {{nearest_prior_address}} back in
{{nearest_prior_date}}. I've got one about {{distance}} miles from that,
off market, {{address}}.

{{why_this_fits}}

Sent you a text this morning and an email an hour ago – didn't want to
just leave it in your inbox.

You still buying in that pocket?"
```

Then stop talking. If they say “send me the info,” it’s already in their inbox — say so, and ask what would make it a fit.

### 9.4 — Voicemail

```
"{{first_name}}, {{full_name}} with Impact Home Team, {{phone}}.

Calling about an off-market property at {{address}} – about {{distance}}
miles from {{nearest_prior_address}}, which I know you bought in
{{nearest_prior_date}}.

{{beds}}/{{baths}}, {{sqft}} square feet, asking {{price}}, ARV around
{{arv}}.

I texted you this morning and sent an email about an hour ago, so it's
```

all in there – photos, comps, scope.  
Offers are due {{deadline}}. {{phone}}. Thanks {{first\_name}}."

Under 30 seconds. Number at the front and the end. Name both prior touches. No second voicemail inside 48 hours.

## 9.5 — VIP first look SMS (Phase 4)

{{first\_name}} – {{sender}} with Impact Home Team.  
New one before it goes out to the list: {{address}}.  
{{beds}}/{{baths}}, {{sqft}} sf, {{price}}. ARV {{arv}}.  
Lockbox {{code}}, go look any time.  
VIP window closes {{expiry\_day}} at {{expiry\_time}} – after that it goes to everybody. {{listing\_url}}

## 9.6 — Priority and regular SMS (Phase 5)

*Priority:*

{{first\_name}} – {{sender}}, Impact Home Team.  
{{address}} just came available. {{beds}}/{{baths}}, {{sqft}} sf, {{price}}, ARV {{arv}}.  
Full details and comps: {{listing\_url}}  
Offers due {{deadline}}. Worth a look?

*Regular:*

{{first\_name}} – off-market at {{address}}.  
{{beds}}/{{baths}}, {{sqft}} sf, {{price}}. ARV {{arv}}.  
Photos, scope and comps here: {{listing\_url}}  
Offers due {{deadline}}. – {{sender}}, Impact Home Team

*Round 2 pattern interrupt (5.4):*

{{first\_name}} – {{sender}}. No pitch, just asking: was {{address}} outside your box, or was it the number?  
Helps me know what to send you next time.

## 9.7 — Realtor SMS (Phase 2, Hour 1)

{{agent\_first}} – {{sender}} with Impact Home Team.  
Saw you closed {{their\_property}} in {{close\_month}}. I've got an off-market one about {{distance}} from it, {{address}}, similar product.  
Do you still have that buyer? Happy to pay a buyer-agent commission.  
{{listing\_url}} – {{phone}}

## 9.8 — Realtor call: commission in the first minute

Say it before they ask. Worked example:

"...and before anything else – this is an assignment, and we're paying a buyer-agent commission of {{commission}} at closing, paid through the title company. That's separate from our assignment fee and it doesn't come out of your client's number.  
So – is that Wilmot buyer still looking?"

**Never be vague about commission.** “We’ll take care of you” costs us the agent.

**Agent objections, short answers:**

| They say                                     | Answer with                                                              |
|----------------------------------------------|--------------------------------------------------------------------------|
| “How does commission work on an assignment?” | The number, the timing, and that it’s paid through title. Nothing softer |
| “I’ve never done an assignment.”             | It closes at a title company like anything else; their client signs an   |

|                                                            |                                                                                                                          |
|------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
|                                                            | assignment of contract instead of a purchase agreement. Offer to have our title company walk them through it             |
| "My client won't touch that much work."                    | Then they're the wrong client — ask who else in their book buys this scope                                               |
| "The deadline is too tight."                               | The deadline is real. State what happens after it. Don't hint that it's flexible                                         |
| "What's the deal with the septic / the road / the access?" | The honest answer from the listing. Every property-specific liability is already written down — read it, don't improvise |

## 9.9 — Sly RVM script (Phase 5)

"Hey, {{sender}} with Impact Home Team.

Got an off-market property at {{address}} – {{beds}} bed, {{baths}} bath, {{sqft}} square feet, asking {{price}}, ARV around {{arv}}.

Everything's on the listing – photos, scope, comps.

Offers are due {{deadline}}. Call or text me back at {{phone}}. {{phone}}. Thanks."

Under 25 seconds. Number twice. Never a second RVM on the same deal.

## 9.10 — Full-list email (Phase 5)

**Subject:** the address plus one factual qualifier. 4305 Fairfax Rd – 3/2, offers due Thursday

[Two to four short lines: what kind of deal it is in plain English, the scope stated honestly, and the sales angle from 3.4.]

WHY THIS DEAL MAKES SENSE  
[Four bullets, one short sentence each. Risk reduction, scope, exit or demand, execution speed.]

YOU SHOULD KNOW  
[Short lines framing the real opportunity and anything a buyer will find at walkthrough. Say it here, not on the phone after they've driven out.]

PROPERTY HIGHLIGHTS  
[Short factual bullets. Systems, lot, outbuildings, road, water/sewer.]

THE NUMBERS  
Price: {{price}}  
ARV: {{arv}}  
[Rent range if it's a rental play. No rehab estimates, no all-in numbers, no yield math.]

Comps: {{comp\_link}}  
Full listing: {{listing\_url}}

Showings {{showing\_plan}}. Offers due {{deadline}}.  
{{sender}} · {{phone}}

## 9.11 — Listing rewrite prompt (3.2 and 3.3)

Run this separately in Claude and in ChatGPT. Same inputs, same prompt, no cross-contamination.

You are rewriting an off-market wholesale listing for an investor audience. I have closed 600+ wholesale deals; write for buyers who have too, not for beginners.

I'm giving you four inputs:

1. The initial seller call transcript
2. The tax record
3. My acquisition agent's notes
4. My first draft of the listing

[PASTE ALL FOUR]

YOUR JOB:

Find the sales angle. Every property has one thing that is the actual reason to buy it – systems already done, the lot, rent relative to the number, the road, access nobody else has, a scope that's smaller than it looks. The draft states facts. You have to find which fact is the reason, say it in the opening, and let everything else support it.

Read the transcript closely. The angle is usually in something the seller said in passing that never made it into the draft.

RULES – non-negotiable:

- My draft is authoritative for property facts. Never substitute public record or your own knowledge. If the tax record contradicts my draft, flag the conflict, do not resolve it.
- No rehab cost estimates, no all-in numbers, no yield math. ARV, price

- and rent projections only.
- Never "cosmetic" unless my draft says it is. Never "full rehab" or "full renovation" – describe the actual remaining work.
- No taglines, no slogans, no superlatives, no condition ratings.
- Honest scope. If it needs work, say what work.
- Include the comp link.
- [BALTIMORE CITY ONLY: do not name the neighborhood anywhere. Street address or a nearby landmark only.]

STRUCTURE:

Opening (2-4 short lines, leads with the angle) · Why this deal makes sense (4 bullets) · You should know (the honest caveats, stated up front) · Property highlights · The numbers · Comps and listing link · Showings and offer deadline.

Flag every assumption you made inline. At the end, tell me the one piece of information I did not give you that would most improve this listing.

## 9.12 — Final edit pass prompt (3.6)

Here is the published listing: [PASTE URL]

Read the live page and give me a final edit pass. I'm looking for:

1. REPETITION. Any point made twice in different sections. Name both locations and tell me which one to cut.
2. Contradictions between sections, or between the copy and the photo captions.
3. Numbers that don't reconcile – square footage that doesn't add up, % of ARV that doesn't match price and ARV, a deadline before the showing window.
4. Anything that reads as hype: superlatives, condition ratings, invented rehab figures, taglines.
5. Sections that run long. Investors read on a phone.

Give me specific line edits, not a rewrite. If the listing is fine as published, say so – don't invent changes to look useful.

## §10 — SEND LOG

Complete before end of each launch day. **A channel with no entry is treated as not sent.**

| Phase | Channel                        | Segment           | Count | Time sent | Sent by | Replies EOD |
|-------|--------------------------------|-------------------|-------|-----------|---------|-------------|
| 2     | Targeted buyer SMS (Tier A)    | buyer-targeted    |       |           |         |             |
| 2     | Targeted buyer emails          |                   |       |           |         |             |
| 2     | Targeted buyer calls (top 20%) |                   |       |           |         |             |
| 2     | Realtor SMS (Tier A)           | agent-[submarket] |       |           |         |             |
| 2     | Realtor calls (top 40%)        |                   |       |           |         |             |
| 4     | VIP SMS                        | buyer-vip         |       |           |         |             |
| 4     | VIP calls (top 10)             |                   |       |           |         |             |
| 5     | Priority SMS                   | buyer-priority    |       |           |         |             |
| 5     | Priority calls (top 20)        |                   |       |           |         |             |
| 5     | Regular SMS                    | buyer-regular     |       |           |         |             |
| 5     | Regular RVM                    | buyer-regular     |       |           |         |             |
| 5     | Email broadcast                | Full list         |       |           |         |             |
| 5     | Round 2 — targeted buyers      |                   |       |           |         |             |
| 5     | Round 2 — realtor calls        |                   |       |           |         |             |

**Phase 2 numbers:** InvestorBase radius \_\_\_\_\_ · buyers in pool \_\_\_\_\_ · buyer Tier A \_\_\_\_\_ · MLS export rows \_\_\_\_\_ · agents ranked \_\_\_\_\_ · agent Tier A \_\_\_\_\_

**Listing:** draft to Joshua \_\_\_\_\_ · approved \_\_\_\_\_ · published \_\_\_\_\_ · final version live \_\_\_\_\_

**Dependencies:** MLS access obtained by \_\_\_\_\_ · lockbox live at \_\_\_\_\_ · inbound owner \_\_\_\_\_

## §11 — CLOSE OUT, STOP RULE, ESCALATION

### Stop rule — when the campaign is exhausted

The list is exhausted when **two** of these are true:

1. Every segment has been through its full sequence with no replies
2. **Three or more buyers independently naming the same objection** — one piece of market information delivered three times, not three rejections. It is the highest-value signal we get and it is routinely thrown away as “buyers being buyers”
3. We’re dialing below the top 40% of either ranked list
4. Two or more walkthroughs with no offer

Then act on the signal, not on effort. **Objection is price** → escalate to Joshua for a reduction, then re-text the top segments with the new number as the reason for the message; a price cut is the only legitimate reason to re-contact someone who ignored us. **Objection is scope** → the listing is wrong somewhere; fix it and re-run the ranking, because a wrong scope class in Phase 2 puts the wrong people at the top. **No objections, no replies, thin A tier** → widen the InvestorBase radius and re-pull. **Structural** — private road, failed septic, no legal access → back to Joshua, and probably back to the seller.

More dials is the wrong answer to all four.

**Re-run the ranking any time the price changes.** The price gate is defined off the buy number, so a cut moves the band and moves who qualifies. Working the old ranking after a price change is working a list built for a different deal.

### 9.3 — stand down

The hour we’re under contract: pause every scheduled send, stop the dialer, update the listing, and tell any agent with a live client. A campaign still running on a sold deal generates calls we have to apologize for.

### 9.4 and 9.5 — keep what the campaign taught us

Within a week of closing:

- **Promote the durable tags.** `dispo-[address]` and `tier-a` die with the deal. `scope-gut`, `fin-cash`, `buys-[submarket]` and the price band are true about the buyer until their behavior changes — those stay forever. After a handful of deals the database self-segments before we export anything.
- **Record behavior the data can’t give us:** responded y/n and to which channel, walked y/n, offered y/n and at what number, and their objection in their words. A buyer who replies to SMS and never opens email is a fact we now own.
- **Note the winner** — what they paid, how fast they moved, what they wanted in terms. Their next purchase is what we should be sourcing.
- **Append both Phase 2 lists to the master files,** deduplicated on entity for buyers and on agent for realtors. After enough deals the master beats a fresh export in any submarket we’ve worked, because it holds response behavior and an export never will. **The ranked agent list is the more durable of the two** — agents stay in a corridor for years, and the same names carry the next deal on that road.
- **Save the final listing copy with the deal.** The angle that sold a 1950s Dundalk rancher on a private road will sell the next one, and rewriting from scratch every time is how the good openings get lost.
- **Move the winner to VIP,** and any targeted buyer who responded to Priority, at the next monthly hygiene pass.

### Escalate to Joshua, don’t improvise

Any price change · any terms change · an inspection contingency request · a title defect or access issue · **any** seller communication · three or more buyers naming the same objection · an agent asking for something outside the standard commission structure · a buyer we’ve never worked with asking to close outside our title company.
